

## Clone - 1E11

(No. M7-148)

### Principal investigator

**Fortune Kohen**

Faculty of Biology  
Department of Biological Regulation

## Summary

**Monoclonal antibodies for peptide and steroid hormones** Due to their high specificity and sensitivity these antibodies may be applicable for research, diagnosis and therapeutics. A particular use may be quality control of industrial manufacturing of food products.

**Peptide Hormones:** 147-148 - Monoclonal antibody to hCG Description: Monoclonal antibodies raised against bhCG. Available clones: 1D5 (IgG1), 1E11 (IgG2b). Human chorionic gonadotropin (hCG) is a [hormone](#) [1] produced by the syncytiotrophoblast, a component of the fertilized egg, after [conception](#) [2].
