Department of Molecular Cell Biology

Summary

258 - Monoclonal antibody to Ermin Description: Monoclonal antibody to Ermin (MAb160) raised against purified GSTâ€“Ermin (residues 1â€“261). Ermin is a marker of myelinating oligodendroglia, localized to the outer cytoplasmic lip of the myelin sheath and the paranodal loops. It was suggested to play a role in cytoskeletal rearrangements during the late wrapping and/or compaction phases of myelinogenesis.
